external device such as a display screen 210 via display adapter 212, serial ports 214 and 216, a keyboard 218, a fixed disk drive 220, a floppy disk drive 222 operative to receive a floppy disk 224, and a CD-ROM player 226 operative to receive a CD-ROM 228. Many other devices can be connected, such as a pointing device 230 (e.g., a mouse) connected via serial port 214 and a modem 232 connected via serial port 216. Modem 232 may provide a direct connection to a remote server via a telephone link or to the Internet via a POP (point of presence). Alternatively, a network interface adapter 234 may be used to interface to a local or wide area network using any network interface system known to those skilled in the art (e.g., Ethernet, xDSL, AppleTalk™).

[0032] Many other devices or subsystems (not shown) may be connected in a similar manner. Also, it is not necessary for all of the devices shown in FIG. 2 to be present to practice the present invention, as discussed below. Furthermore, the devices and subsystems may be interconnected in different ways from that shown in FIG. 2. The operation of a computer system such as that shown in FIG. 2 is readily known in the art and is not discussed in detail in this application, so as not to overcomplicate the present discussion. Code to implement the present invention may be operably disposed in system memory 206 or stored on storage media such as fixed disk 220, floppy disk 224 or CD-ROM 228.

ABSTRACT OF THE DISCLOSURE

A method for dynamic linking of software modules includes detecting an event during the execution of a computer program that resides in a first memory, ascertaining whether there is at least one required property associated with the event if the event is detected, determining a property identifier for the at least one required property and loading at least one executable code module from a second memory into the first memory based upon a property identifier configured with the executable code module. According to one aspect, the loading includes loading the at least one executable code module into the first memory if it is not in the first memory. According to another aspect, the at least one executable code module includes at least one dynamic link library (DLL). According to another aspect, the event includes the addition of a hardware device and the required property includes a hardware device PROM identifier.
